Office Action Summary

DETAILED ACTION

Supplemental

Election/Restriction

1. Applicant's election with traverse of claims 26-36 in Paper No. 6 is acknowledged. The traversal is on the ground(s) that there is no burden to the examiner because the claims were considered in the parent application. This is not found persuasive because the claims in the present application are not identical in scope to the claims in the parent application. As a proper examination of the application relies on searching the claims (not just the disclosed invention), a burden exists.

Upon indication of allowable subject matter, examiner will rejoin and allow all claims containing the allowable combination.

The requirement is still deemed proper and is therefore made FINAL.

Treatment of Claims Based on Prior Art

2. 35 USC 102 includes the following sections which state:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 26-32, 34, 36 are rejected under 35 USC 102(e) as being anticipated by Hashimoto (US 6201193).

The marks are (25) as shown in the cover figure. The electrical connecting portions are lands (8).

On claim 32: The marks are "concerned" with a state in which the portions are formed, the state being the particular configuration.

On claim 34: The time of formation of the marks is a process limitation that does not affect the resulting structure in any way. As such, the product of claim 34 is the same as that of Hashimoto. See MPEP 2113.

4. Claims 26, 33-36 rejected under 35 U.S.C. 102(e) as being anticipated by Hertz et al. (US 5381307, hereafter Hertz).

Hertz teaches marks (504) on the corners. The connecting portions are lands that receive solder balls. Therefore, they can be construed as lands or as solder balls.

Related Prior Art

5. The following references are considered pertinent to the present application.

Klein (6084781) discloses marks (124) in figure 5.

Kubin (5912438) discloses marks (36) in figure 4.
